

VICTOR EZEANYIKA

Full-Stack Engineer · Backend-Focused (Java, Go, TypeScript)

Lagos, Nigeria (Remote) · +234 901 483 9655 · victorezeanyika@gmail.com · victorezeanyika.dev · github.com/vctrez · linkedin.com/in/victorezeanyika

SUMMARY

Full-stack engineer with a backend focus, building payment systems, email infrastructure and media platforms in Java, Go, and TypeScript. Backend Engineer at PayOnUs (fintech), designing Spring Boot REST services after a year shipping React/TypeScript frontends there. Founder of UseSendi, a developer-first transactional email API and creator of Torrin, an open-source debrid service written in Go. Comfortable owning products end to end from API design, infrastructure, UI and shipping to paying users.

SKILLS

Languages: Java, Go, TypeScript, JavaScript, SQL, Solidity

Backend: Java, Spring Boot, Go, Node.js, Express, Next.js (server/API routes), REST API design, PostgreSQL, MongoDB, Redis, Amazon SES/S3, SMTP infrastructure, object storage (Cloudflare R2), authentication & security

Frontend: React.js, Next.js, React Native, TailwindCSS, Material UI (MUI), HTML5, CSS3, accessibility

Infra & Tools: Docker, GitHub Actions (CI/CD), Nginx (VPS), Vercel, Cloudflare, Railway, Render, Git, Agile/Scrum

Domains: Payments/fintech, email deliverability (SPF, DKIM, DMARC), debrid, open-source development

EXPERIENCE

Backend Engineer at PayOnUs Feb 2026 – Present

Fintech · Full-time · Lagos, Nigeria · Hybrid

- Design and maintain scalable backend services in Java and Spring Boot for a payments platform, building and documenting RESTful APIs consumed across the product.
- Optimize database queries and interactions; own reliability, performance, and security of production services in a cross-functional Agile team.

Frontend Engineer at PayOnUs Jan 2025 – Present

Fintech · Full-time · Lagos, Nigeria · Remote

- Developed responsive, accessible web applications in React, TypeScript, TailwindCSS, and Material UI, collaborating in Agile sprints from planning through delivery.
- Moved onto the backend team in Feb 2026, now working across the full stack.

Creator & Maintainer at UseSendi Mar 2026 – Present

Developer-first transactional email API (usesendi.com) · Remote

- Founded and built a transactional email platform in Next.js and TypeScript on a multi-tenant PostgreSQL backend, sending through Amazon SES with domain verification (SPF/DKIM/DMARC), open/click tracking, scheduling, batch sending and delivery webhooks with automatic retries.
- Engineered a custom SMTP relay service in Node.js (TLS, per-IP auth rate limiting) so customers can send via SMTP credentials or the REST API; implemented idempotency keys, per-plan rate limits, inbound email parsing and subscription billing.
- Published official Node.js (sendi-email on npm) and shipped a companion React Native (Expo) mobile app.

Creator & Maintainer at Torrin (Open Source) May 2026 – Present

Open-source debrid service & Stremio addon · Go · MIT (torrin.app · github.com/torrin-app/torrin) · Remote

- Created an open-source debrid platform in Go that turns magnet links, NZBs (Usenet) and hoster links (1fichier, Rapidgator, Mega) into instant cached HTTPS streams allowing no torrent client, no local downloads, no IP exposure.
- Engineered the core pipeline: VPN-isolated torrent engine, download → object-storage → cleanup job orchestration with stall detection and progressive recovery, signed-URL streaming via a CDN worker, and a shared cross-user cache with popularity-based retention and eviction.
- Built the Stremio addon and an in-browser player supporting MKV, HEVC, AV1, and 4K HDR; integrated BYOK debrid providers (Real-Debrid, Premiumize, TorBox) with stable addon links that survive settings changes.
- Operates on an open-core model: MIT-licensed core with a proprietary API/billing layer, subscription tiers with plan-based concurrency limits and priority queues, plus a fully self-hostable Docker deployment.

Founder & Lead Consultant at theGlitchLabs Apr 2024 – Present

Software agency · Lagos, Nigeria · Remote

- Run a software agency delivering web, mobile and blockchain products for client businesses from owning scoping, architecture, development, deployment, and ongoing support.

- FlashX; built a fintech app for a client end to end covering wallets, transfers, bill payments, crypto trading, KYC, OTP, referrals and audit logging.
- Integrated Nigerian fintech rails into FlashX and shipped the companion React Native (Expo) mobile app.
- DialPro; built a virtual phone number / OTP reseller platform for a client plus separate React (Vite) customer and admin dashboards.
- Both client products run transactional email on UseSendi via its sendi-email SDK, dogfooding the founder product in production client work.

Freelance Web Developer at Upwork Apr 2024 – Feb 2026

Freelance · Remote

- Delivered custom React and Node.js applications for international clients, managing requirements, timelines, and delivery end to end.

EDUCATION

APTech Computer Education - ADSE (Advanced Diploma in Software Engineering) Jun 2021 – Sep 2024
